

The Importance Of Artificial Intelligence

Soon a legal document will be posted, so all interested parties can judge its importance in identifying and magnifying the criminality that is keeping me unlawfully detained/incarcerated - My being able to ask an artificial intelligence program educated questions to achieve the correct and substantiated by law responses we want it to give - is of major importance - since we need to be absolutely sure the answers the artificial intelligence program gives cannot be refuted and that means its answers must be in accordance to the letter of the law - which works to our advantage - since we can ask it questions that put the criminal elements that have blatantly abused the law under the spotlight - like asking the artificial intelligence program after it has weighed in on the merits of the pro-se legal document - to give the percentage of appellate attorneys required to vigorously raise and argue the issues brought forth in the pro-se motion ??? After it responds with a one hundred percent number - the door is open to identifying the criminal actions of all the attorneys that failed to zealously pursue the facts that show their client did not receive a fair and impartial trial !!! There cannot be any excuse to not provide diligent and zealous legal representation to their client ... If the issues that prove their client did not receive a fair and impartial trial exist - they are obligated to bring those issues forward and if they fail to do so - must be made to respond as to why they didn't !!! If the evidence shows a consorted effort to conceal the facts that prove a fair and impartial trial was not administered - that is evidence of racketeering (obstruction of justice) I don't need to show a motive as to why the attorneys consorted not to vigorously pursue the issues that prove a fair and impartial trial was administered, only that they did !!! You see - I have had no way to bring forth and highlight the miscarriage of justice I have endured all these years (except to point them out myself and make my grievances part of the record) Since under mandate of law - I been forced to accept the representation provided me - even though it has been ineffective !!! Now with the help of an artificial intelligence program - I can show how the legal system has been manipulated to conceal the evidence that proves I did not receive a fair and impartial trial ...
