

Nate A. Lindell 2012

As I recall from reading a book by Eric Van Lustbader, in Oriental mythology, dragons (without wings — European dragons have wings) are symbols of good luck vs. "evil". Their vivacious wriggling, revealed by — as the above drawing shows — their twisted appearance, is seen as cheerful. Thus you see Orientals during their festivals donning a long dragon costume & moving it every which way they can.

Some Christians would still deem it a representation of Satan, which just isn't justified. Satan, as a fallen angel, has wings, etc.

Anyway, hope ya like this drawing readers. Any of you who've transcribed my posts, holler if ya want your own copy, & anyone can feel free to copy it from my blog & post it elsewhere, so long as they post my URLs with it:
