USA/SEP United States Solar Energy Project

This could be the largest job creation project of our time, welcome to: CalSep

California Solar Energy Project

We envision the state of California to solidify its place on earth as the leaders of innovative technology, science, conservation and employment growth as well as the realistic care-taker of our planet and solar system community of our universe.

The proposed funding will provide for all property and materials formerly known as Solyndra in the City of Fremont California to be renamed and owned by an entity to be known as "CalSep".

The CalSep first order of business will be to begin hiring Californian unemployed residents, college and tech graduates, and inner city youth for full time qualified positions as expeditiously as possible, from Administrative positions to ground keeping; these multiple properties can be the headquarters of the future.

We also envision that this massive job creation project could serve as an open door invite to all men and women returning to our communities from military service and from abroad who are seeking immediate employment in line with their qualifications.

Teams of employees will be appointed to set up CalSep work and training programs within the prison system of the state, setting in section a grand scale official operation to train prisoners to work directly within inner city youth to convert every state and federal prison into self contained solar energy power plants that harvest the sun's energy to power each institution and feed power into the national grid.

The States of California currently has over 30 state prisons, not including the large number of private and federal prisons, of buildings and properties sitting under the sun for hundreds of years.

The proposal pays for itself by relieving the state from purchasing electricity from other states and making the state energy independent.

This proposal also provides prisoners with employment on the first day when re-entering society as CalSep provides for the employment of ex prisoners including those on parole supervision to drive a decrease in high recidivism rates. The CalSep mission also provides for a new project called "The New Walk" division at CalSep which operates specifically to represent the community to former prisoners that re-entry into prison is absolutely unacceptable.

The New Walk division at CalSep will hire proper parenting, positive youth development programs within the framework of the social services provided at the New Walk division. The organization will also provide transitional settings and temporary living quarters for those former prisoners re-entering society with "independent status". I personally aspire to head this new walk division at CalSep.

The New Walk division at CalSep will be operated by Inner City Youth and Community Specialists, rebuilding the connection between generations of society committed to the CalSep proposal of converting every state into solar Energy Agents in direct connection with the CalSep headquarters at USA/Sep.

Inner city youth will team-up with former prisoners to travel to each state to acquire contracts and business proposals that educate political leaders, law enforcement and community leaders and homeowners to convert to the purchase of electricity from the USA/Sep corp, due to the competitive lower rates and the social and economical advantages that come with the massive energy conversion project geared toward building communities, rebuilding lives, maintaining the health of our planet and emptying prison cells indefinitely.

This community workforce will be trained to install solar energy panels and equipment to homes, business, and various hospitals, fire departments and emergency crisis centers, especially our team of specialist with military background experience able to go into any emergency situation within the borders of this country to help provide emergency solar generated power during any natural disaster like floods, earthquakes, fires and tornadoes etc...

Every USA/Sep employment position will be considered a position of deployment by the citizens of planet earth endured with the responsibility to help sustain the health and safety of our planet and life as we know it.

Every USA/Sep employee will be issued a card for automatic digital transfer of earned wages that can be used and accepted as honourable debit transactions of funds anywhere in the Continental U.S territories by all financial institutions, food market chains, merchandise materials, travel corporations, the auto market and anywhere credit cards and digital transfer of funds are accepted without risk of overdraft.

The USA/Sep card will also be accepted by licensed medical insurances providers that are linked directly to that healthcare provision of Obamacare legislation.

We also envision that with US states serving as active prototypes, our teams will be accomplished well beyond standard to address G20, Nato and all USA allies and the entire world to join USA/Sep by converting other countries to total clean energy so that other sources of energy can be considered secondary and backup sources of energy.

I personally will suggest to challenge our brilliant Inner City Youth to create a realistic design for every gas station in this country to be outfitted with electric quick charge machines that not only recharge electric vehicles, but also a quick charge docking portal for electronic gadgets like cellphones, Ipods, laptop computers etc...

Our President has asked our youth to be leaders in the fields of science and mathematics, what better way to challenge our youthful most brilliant brains of the USA than to create recharge docking stations that are solar power and sit side by side with and inevitably replace Filler station pumps.

Schools, hospitals, amusement parks and other businesses can install solar vending machines that plug into solar generated power sources. Our youth can invent the world's first solar powered docking vending machine where quick charges can come at the price and rates projected to operate and provide maintenance for the machine. People can purchase snacks and recharge electronic gadgets at the same time and all with clean solar energy. Our sales

teams can propose to sports arenas and franchises, government buildings and even the White House and Supreme Court that they can take the lead by installing USA/Sep products invented, designed, built and maintained and assembled by the next generation of our nation's youth.

This is a bipartisan, solution based, global effect series of ideas and projects that aim to silence debate and non productive and time consuming complaints and old business as usual blame game between our human species. All of us are correct about each other, now let's correct ourselves by taking the lead role in passing a worthy torch into the hands of our new generation all in favor say I.
