

Ronald W. Clark "WASTED WATER"
Sept 1, 2012

Page 1 of 1

Hundreds of thousands of gallons of water are wasted daily in lock down units, such as P-Dorm, Death Row Housing. Inmate's will sit here and constantly flush their toilet's not 2 or 3 time's but 2 or 3 dozen time's within an hour. Some of them doing this because their mentally ill. Other's doing it using their toilet's as a washing machine. Dookie washers, is what I call them. Their too lazy to fill the sink top, and wash clothes there. So with this, hundred's of thousand's of gallon's of Fresh water, a day, is being flushed down the toilet.

Is there a solution?!" yes, cut OFF valves. In the Duval County jail, the toilet's are fixed with cut OFF valves, and set on a timer, where the toilet's can only be flushed a certain number of time's per hour. IF the toilet needs to be flushed any more than that, the OFFICER can go back there, and reset it. Some one was smart enough to design that, to ensure inmate's were not wasting water. However the FDOC is not smart enough to use this system and stop all of this waste.

Hopefully some one will read this and bring it to the attention of the Governor or Florida Legislature and bring about some change.

Sincerely Ronald W. Clark
