* * * * *

There is an epidemic here of Black inmates exposing themselves to mental Health Clinicians - which are mostly white women. Althow this facility is a secure setting - they still manage to Lure these female staff to thier cell doors and masturbate - even more surprisently some clinicians actually participate by watching these acts. Even more disturbingly is in group settings - we are placed in single cages to keep us separated but the indecent exposure happens frequently here too - These people have no respect for them selves or those that come to treat us. To curb this problem the prison Administration is hiring more male clinicians. In my mind it will improve this sickness as time moves along the incidents should almost halt. prison is not what it used to be - I'm not sure that theres been a dramatic rise to inmates masturbating to female staff because they took away all our mens magazines & family over night visits. But I'm sure it does contribute to it. For me I'm sick of Black inmates in prison - They always mess up everything thats good.
