

How do They do it?

Have you wondered how prisoners
make Tattoo Guns and Ink or a
Speaker out of cardboard a little paper and
some thin wire or how you'd be quite
surprised at what we can learn from
within these walls or just by taking
the initiative just through prison I've
learned how to make a stinger an item
used to heat water to drink coffee or
for soup. how to stretch plastic strips
then twist it to make string the more
you twine it the stronger it becomes
we learn to make do with what we get.
Even how to rewire a radio so it can
pick up a television station how about
how to make glue or paint to paint a cup
whatever color we wish what surprised me
was watching another make a tattoo gun

Using a Bolt 2 Bottle Caps plastic and wire
 wrapping the wire around the bolt continuously
 until there is enough wraps sufficient then
 taking a metal strip like from a pallet Jack
 bending it and putting a Magnet on the End

One of the wires are run into water
 as a conductor But we usually
 use something that reduces energy and run
 it through that. you can not plug it directly
 into a socket! or it will pop!

Speakers are made from Magazine Paper
 the center cut out and a coil made with very thin
 wire. a little cone is made  wire is wrapped
 around and Glued securely to the cone evenly ↓ and
 then worked back up this is glued to the Paper
 and the magnet attached to the cone and of course
 wires attached to speaker output connector
