: ON 2/4/15 Another Cellie murders his cell partner. Both inmates were housed in a protective housing unit. The death toll is much higher on these SNY yards. The CDCR does nothing to curb these murders. For one inmates are not properly paired. For instance sex offenders are regularly without any screening housed with other inmates that kill them immediately - And in some cases staff alert inmates who will be coming into that cell. What can be done to change how the CDCR does its business. We would like your comments on what CDCR can do to curb these murders. For one thing you can go on live and speak to the spokes person of the CDCR that would be a start.
