## Re: Comments About Dr. Michio Kaku by Nate Lindell

The first I learned about Dr. Kaku was while I was at Allenwood USP & stumbled across his radio show, "Science Fantastic," which I L-O-V-E-d! 😊 He struck me as a Bill-Nye the Science Guy for adults. As I recall, I posted something about him then, but, if not, "y'all" can & should look him up on facebook, at [mkaku.org](http://mkaku.org) & can call in any science questions you'd like answered (on his show) at 1-800-323-2129.

I had a free friend call in two science questions for me & referred Mr. Kaku (& his listeners) to my blog. But, not all questions are aired & it doesn't seem mine made the cut.

Yes, Dr. Kaku is reputed to be one of the co-god-fathers of String Theory (as I recall), and he's recently been hyping his bestseller, The Future of the Mind, or titled something like that, which is (or was — you know how quickly the new becomes old in science...) all about current science & technology concerning the human brain & consciousness.

I didn't mention Dr. Kaku (I so badly want to refer to him as Dr. Kak!) in the post about Dr. Krauss & the Origins Project because, as huge a hero of science as Dr. Kaku is, Dr. Krauss is aiming at the heart of the beast, Ignorance; & besides, Dr. Kaku never got back to me. 😞

Dr. Krauss's Origins Project seeks to discover the origins of matter & life on Earth. This, like an intelligible purely material theory of consciousness (more on this in a bit), will kill a lot of superstitious ignorance that has caused much pain for humanity. I doubt Dr. Krauss would've received the support he needed for his project... 100 years ago; and 200 years ago he might have been burned at the stake.

That is why I didn't blubber about Dr. Kaku, who merely helped create the most plausible theory of everything. ☺

Remember, I am a poor prisoner. I lack access to even such periodicals as Scientific American. It was merely by chance I found Briane Greene's The Hidden Reality on the SHU book cart (it drove my cellie crazy that I picked it, as he couldn't even understand the title). — This is a blatant attempt to guilt you into sending me good science books + magazines! ☺

One disappointment I had concerning Dr. Kaku, which formed the basis for one of my questions I had called in, was when he interviewed Dr./Prof. James Fallon of U.C. Irvine, about his book, The Psychopath Inside. Although it's understandable (minds close at scary subjects), Dr. Kaku kinda bullied Dr. Fallon, tried to get him to say, for example, that psychopathology was untreatable + psychopaths needed to be locked up in harsh conditions 'til death. As much as I despise what Ted Bundy, in particular, did, the truth is he loved + protected his daughter, which implies he was not a total piece of shit. Dahmer didn't kill + eat women + was well-behaved in prison. Both Bundy + Dahmer were top-of-the-line psychopaths + Bundy shouldn't have ever been let around pretty brunettes nor Dahmer around young men... but to lock either up forever in brutal conditions would bring no one back to life + only satisfy society's psychopathology... Inside.

Einstein balked at quantum physics. I guess Dr. Kaku can't be perfect.

Thanks for Reading  
Note

P.S. I'm being transferred tonight!
