## Solve transgender Bathroom Conflict

I would like to address this transgender bathroom situation. Personally I feel this whole situation has gotten out of control. People have the right to choose; who they want to be, do it right, that's not for us to judge. But however their needs to be a appropriate decision made in this matter. This doesn't have anything to do with discrimination, to me that is going to the extreme. Let's talk about what is transgender?

Transgender is someone who was a male but now they are identified a female or was a female but now identified as male. Majority of them go through the whole process of having surgery to have their sex change. Some go as far as to take the hormone, get the breast implants or removed but they don't go through the process to get their male or female private part removed.

Here is the problem; It opens the door to a lot of deception that can hurt innocent people and children. Someone can be a transgender male but has a female private part. They can enter the male bathroom because they are identified as a male. This is the same for a transgender female but has a male private part. These individuals if they have a perverted mind can rape or sodomized children or innocent citizens. This is a open door for a sex offender to victimize again. I really want everyone to think deeply about this. You can have a sex offender who looks like a man but is not a man, but he cross dress to get to the victim. In the same way is not a man or transgender. That goes the same for a male sex offender. He can do the same thing in

enter into these public restroom. Do everyone see what I am saying. Sex offenders can use this to their advantage. I am not slamming the transgender because they are important as everyone else. But the core of this subject is ~~safe~~ safety for our children and people in society. We are not trying to give sex offenders free access to harm people. The solution I came up with is, why not build bathrooms for the transgender. That is not discrimination. We have special bathrooms tall, and parking spaces for handicap people. To me that is accommodating these individual needs.
