

Virtual schooling

Majority of children is being homeschooled. They need laptops and WiFi. I like what I seen on the news. One lady collected old computer in ~~replacish~~ replacish ^{the} computer that had ~~been~~ torn up and the other lady collect computers for children who didn't have a computer to do work on. Some other things that been going ~~on~~ on in another community. The school is ~~bring~~ ^{delivering} breakfast and lunch to student house. Making sure the children is alright and learning at the same time. This ~~excites~~ excite me ~~because~~ because someone care enough to do this to make sure they get their education. But I want to talk to the students. Many of you want to be where you friends etc. I like this do a positive job. you can learn without distraction. Sometime in school there can be alot of distraction. It nothing like taking your test in peace. Reading in peace or doing your works in peace. Just a peaceful environment. Now I want to talk to the teachers you can still be creative in virtual. you and the class can play games over the internet. They need to create a chat box where the whole ~~class~~ class can chat or chat with their friend privately like a recess. I dont know the extinct of technology. Maybe somebody wants to look into.
