

12/27/21

I have been in prison since (1991) In that time I have seen so much deception by the inmate population as well as the staff that run the prison system. The messages that are trying to be achieved are always one sided by the Department Of CORRECTIOS.

They continue to try pilot programs that are allegedly possitive. But they never bring about good results. One of the most recent ones is that they are offwering the population a drug that is supposed to help the addicts-It is a drug called (Suboxin). There never was a whole lot of the inmates that have an adiction to Herion-But since the introduction to this drug the numbers have increased to inmates suggusting to the doctors that they have the addiction-just so that they can sell it to the population that actually HAVE A PROBALEM. Now we have over half the yard that now gets into the med line so that they can sell thier Suboxin.

It is sad that such a thing was not forseen by these staff members. Now there really is alot of the guys that are strung out on this drug.

It is in my conclussion that this is the worse pilot program t that Corrections has done up to this point. But do know this is not alone in the mismanagement of Corrections.
