

Internet Safety for Children and the mental patients

I believe that adult should be logged in as the children care taker so that the data will recognize that its dealing with a child. If a child try to go in a place that they don't suppose to be on, the screen should automatically shut them down completely. Children should only be allowed to google only certain type of information. We got to get children back to being children so they can develop in every stage of life in a healthy way. So they can be productive citizen etc when they get ~~grown~~ become adults - one they will know how to embrace life with the correct decision that would lead them to healthy relationship with friends and family. Some of the children minds has already been expose to things in school, neighborhoods and internet they shouldn't have been. Now needing help to eradicate the bad behavior they have picked up. Which can be corrected through many channels - some children needs a listen ear for example.

Parents need to start allow them only so much internet and game time. There has to be a balance with children. I am thankful that my family raised me to be balanced in life; it causes a less stressful day. Another thing I want to bring to people awareness is what we allowing people to do that has been ~~diag~~ diagnose with a severe mental health issues. The care giver should be aware of what they are doing at all times. You can take a mental health patient that is 35 years old been diagnose with one of the following: Insanity, Madness, Mania, retardation, Senility, Schizophrenia, Paranoid and Hallucinations few example here

Some patient return back to their childhood in their minds, So why would you allow this patient to get a gun build it according to something they seen on the internet or why would you allow them to be on internet watching all types of filth. Knowing this can affect their minds. ~~So~~ This why is important for their caretakers to log in on the computers / monitor as well but patients should have the same limits as the children. ~~So~~ So the patients can only have access to certain type of data because of their condition.

If they go in certain area that is not healthy to their mind, the screen shut down. One area I think of is porn, and violent video games. Some people with mental health issue sometimes start to tag over into violence and rape - sexual aggression. Which both lead them down a road of destruction such as sex offenders and gun violence. We got to have some safety for our society. I believe if these computer giants make it hard for children and mental health patient to get to material that is not healthy for their minds. We will see a whole change of mortality with this group of people.
