

TX DEATH PENALTY FUTURE DANGER ISSUE.

The death penalty is irreversable, and is different than any other punishment doled out by society to criminals. The lesser value america puts on the lives of its citizens, has made the use of capital punishment and Texas the scope of the world when use of execution is mentioned, Texas is indeed ground zero, being responsible for one third of all executions in USA. The wizest philossopher's teachings have reiterated over centuries of time that our history should be our best teacher. But our vendictive nature as a christian based society teaches that vengance is ok, in order to demonstrate society's revulsion at crime, its determination to end the cycle of crime, violence verses the majority that now believe its the moral equivalent to Murder.

many of these arguemnts are fought in political arenas, platforms, even elections and re-election campaigns over the decades have run on a message of tuff on crime expand the death penalty. one such 3 ring arena is currently leading our country.

Support for capital punishment is down to all time lows. The use of it has droped even more recently regarding the ability of certain low budget cities, counties to afford to seek the death penalty. It is just another example of the arbitrary use of the ultimet punishment.

our country was founded on the principles of life liberty and the persuit of happiness. These inalienable rights are the exact rights our founding fathers desired when leaving England, its use of capital punishment & the loss of rights, freedom of individual rights. Like the right to bear arms, the right to defend ones self, property, or loved ones. guarenteed to us by our Constitution.

Our legal system based on judio/christian roman law has served us well to some extent. But we are indeed caught in the past, failing to catch up in the world wide trends of modern advancement, legally morally and as a world leader. We have a raised bar to set, an example to show to our fellow human beings. The U.S. Supreme Court has tetored and totered tinkering with capital punishment, but failed to end it. It is infact the cruelest form of cruel & unusual punishment known. Leaving people to rot away in solitary confinement, torchuring them almost to death before hauling them to the execution chamber decades later, only to victimize their family, friends, friends. it reopens wounds of victims and their extended families to. The term of justice served is in service of whom? The High court has failed us repeatedly.

Our Supreme Court has stated that capital sentences must be treated with special scrütiny, in order to asure that the sentence is purportionate to the crime, in order to avoid unfairness or arbitrariness in the application of the ultimet punishment.

Psychiatric testimonies of expert soothsayers, who can perdict the future dangerousness of a capital defendant, is the worst example of a broken system full of hypothetical hypocritical asertions that a person placed in prison will not be redeemed, not change, will kill again even in a prison seting! Its high time this junk science has to be debunked. time itself has proven this to be false. Many death row prisoners have spent decades, quarter centuries on death rows, never comiting one more single act of violence. Isn't the bench mark standard of any science to study the statistics? to show the end result. It is the ultimet due process violation of a persons life, liberty and redemption, the persuit of freedom. Means are in place in an advanced society, life without parole, is the leading alternative. Rehabilitation, education, change happens to even the worst of the worst soles awaiting execution. Most indeed do get onto the execution gurney and profess their sorrow, apoligising, praying. when will we wake up to the injustice of our system?
