

Hello my name is Jennifer Ophinson, I have
a case with two hospitals. I cannot keep my
mouth closed. Cause I feel they took advantage
of the patient and family. The hospital in
Trenton, NJ where my dad failed two years
ago at his house. The ambulance came of
course. my dad was 68 years old. yes,
he had health issues But he didn't die from
person health issues. The hospital killed my
father. leaving my sister to find a lawyer for
a malpractice case. She has been having sleepless
nights, headaches etc. for our family. There has
been a lot of tear sharing as we lost our father.
The ER punctured our dad's lungs during the procedure
of placing a chest tube. That is why he had so
much fluid being drained in the NICU. They diagnosed
him with Rhinopharyngeal which is an infection in his throat
more collection of fluid, in his case a large, solid
fluid behind his larynx (voice box) that they attempted
to remove but started placing a chest tube, punctured
his lungs, he started experiencing respiratory distress
and they intubated him, when they punctured his lungs

Collapsed lungs, then intubated the patient, the hospital became dependent on the respirator. He went into a coma and they were rushing us to pull the plug because they wanted complete comfort for him because they had caused him harm. The hospital took our father's V.A. insurance money and personal insurance money leaving the family with pain and suffering as they had to come out of the pocket for the funeral. They reimbursed my sister for what they caused them to pay out of their pocket. Every dime the hospital took from our family should be given back plus interest cause they caused our father's death. Now my daughter has been in ICU numerous of times hanging on for her dear life. Now left with many problems as she went to Northside hospital because she had been hurting in her stomach. She finally went to Northside hospital in ~~Atlanta~~ Powder Springs, GA. She was throwing up. Immediately they admitted her and she had immediate surgery to get a gallstone that was stuck. They got the gallstone. Then scuffle to get her gallbladder out. Her heart rate was high. Finally on CAT Scan they discovered when they put the tube in her they punctured her intestine. Her body has went through so much she stayed in the hospital for three months mostly in ICU. After three weeks, she's back in the hospital because she had fluid behind

Stomach pocket. They didn't give her the antibiotic
when she went home. Like they was suppose. Now
they want to give her ~~antibiotic~~ antibiotic. As her
parents we are really upset because how can
any hospital do that to their patients. She said
mom I have a large hospital Bill and she
lost wages. She lost her insurance on her vehicle.
She said mom we are scared if I say anything
they want take care of me. I want to get well
first. This morning she discovered something
was wrong with her I've. She said her arm is
swollen. Somebody needs to see what is going
on at these hospitals and see if these people
is certified to even be working at hospital. My
daughter should have no hospital bill and she
should be paid for her pain and suffering
without a malpractice case in the court. My daughter
almost died and still she is not 100%. We are
fortunate to have her. Our father wasn't fortunate.
Jersey (Trenton hospital do right my family).
Northside Hospital do ~~do~~ right by my daughter.
I am so sadder that this happen to my dad
and now my daughter. Please Pray for our
family this is sad. written by
