Spirally!

That's so cool you transcribed the old DJT post! Thanks for that. If anyone else is reading... PLEASE choose an older, untranscribed post and see if you can get a transcription done easily. ☺ It helps me and other bloggers here immensely, since when our work is transcribed it gets more attention from the search engines, which can strengthen this site as a whole and get more interaction for us folks in the cages. But it also helps everyone by finding out which AI and OCR programs do the best jobs at deciphering our chicken scratch. ☺ So far, from my perspective, Grok seems to be most accurate and best at untangling the sloppiest (or fanciest) lettering. But try it yourself! Tell us what works and what doesn't.

So - Spirally. It hallucinated whole lines? THAT'S not cool! Which system was it? And content... yeah. That was a long ago fork to a very different timeline. ☺ —D
